## AVVERTENZE PER L'INSTALLATORE

### OBLIGHI GENERALI PER LA SICUREZZA

**ATTENZIONE!** È importante per la sicurezza delle persone seguire attentamente tutta l'istruzione. Una errata installazione o un errato uso del prodotto può portare a gravi danni alle persone.

- Leggere attentamente le istruzioni prima di iniziare l'installazione del prodotto.
- I materiali dell'imballaggio (plastica, polistirolo, ecc.) non devono essere lasciati alla portata dei bambini in quanto potenziali fonti di pericolo.
- Conservare le istruzioni per riferimenti futuri.
- Questo prodotto è stato progettato e costruito esclusivamente per l'utilizzo indicato in questa documentazione. Qualsiasi altro utilizzo non esplicitamente indicato potrebbe pregiudicare l'integrità del prodotto e/o rappresentare fonte di pericolo.
- FAAC declina qualsiasi responsabilità derivata dall'uso improprio o diverso da quello per cui l'automaticismo è destinato.
- Non installare l'apparecchio in atmosfera esplosiva: la presenza di gas o fumi infiammabili costituisce un grave pericolo per la sicurezza.
- Gli elementi costruttivi meccanici devono essere in accordo con quanto stabilito dalle Norme EN 12604 e EN 12605.
- Per i Paesi extra-CEE, oltre ai riferimenti normativi nazionali, per ottenere un livello di sicurezza adeguato, devono essere seguite le Norme sopra riportate.
- FAAC non è responsabile dell'inosservanza della Buona Tecnica nella costruzione delle chiusure da motorizzare, nonché delle deformazioni che dovessero intervenire nell'utilizzo.
- L'installazione deve essere effettuata nell'osservanza delle Norme EN 12453 e EN 12445. Il livello di sicurezza dell'automaticismo deve essere C+D.
- Prima di effettuare qualsiasi intervento sull'impianto, togliere l'alimentazione elettrica e scollegare le batterie.
- Prevedere sulla rete di alimentazione dell'automaticismo un interruttore onnipolare con distanza d'apertura dei contatti uguale o superiore a 3 mm. È consigliabile l'uso di un magnetotermico da 6A con interruzione onnipolare.
- Verificare che a monte dell'impianto vi sia un interruttore differenziale con soglia da 0,03 A.
- Verificare che l'impianto di terra sia realizzato a regola d'arte e collegarvi le parti metalliche della chiusura.
- L'automaticismo dispone di una sicurezza intrinseca antiischiaffiamento costituita da un controllo di coppia. E' comunque necessario verificare la soglia di intervento secondo quanto previsto dalle Norme indicate al punto 10.
- I dispositivi di sicurezza (norma EN 12978) permettono di proteggere eventuali aree di pericolo da Rischi meccanici di movimento, come ad Es. schiacciamento, con vogliamento, cesoialmento.
- Per ogni impianto è consigliato l'utilizzo di almeno una segnalazione luminosa nonché di un cartello di segnalazione fissato adeguatamente sulla struttura dell'infissi, oltre ai dispositivi citati al punto "16".
- FAAC declina ogni responsabilità ai fini della sicurezza e del buon funzionamento dell'automaticismo, in caso vengano utilizzati componenti dell'impianto non di produzione FAAC.
- Per la manutenzione utilizzare esclusivamente parti originali FAAC.
- Non eseguire alcuna modifica sui componenti facenti parte del sistema d'automaticismo.
- L'installatore deve fornire tutte le informazioni relative al funzionamento manuale del sistema in caso di emergenza e consegnare all'Utente utilizzatore dell'impianto il libretto d'avvertenze allegato al prodotto.
- Non permettere ai bambini o persone di sostare nelle vicinanze del prodotto durante il funzionamento.
- L'applicazione non può essere utilizzata da bambini, da persone con ridotte capacità fisiche, mentali, sensoriali o da persone prive di esperienza o del necessario addestramento.
- Tenere fuori dalla portata dei bambini radiocomandi o qualsiasi altro datore di impulso, per evitare che l'automaticismo possa essere azionata involontariamente.
- Il transito tra le ante deve avvenire solo a cancello completamente aperto.
- L'utente utilizzatore deve astenersi da qualsiasi tentativo di riparazione o d'intervento e deve rivolgersi solo ed esclusivamente a personale qualificato FAAC o centri d'assistenza FAAC.
- Tutto quello che non è previsto espressamente in queste istruzioni non è permesso.

# ENGLISH

## IMPORTANT NOTICE FOR THE INSTALLER

### GENERAL SAFETY REGULATIONS

**ATTENTION!** To ensure the safety of people, it is important that you read all the following instructions. Incorrect installation or incorrect use of the product could cause serious harm to people.

- Carefully read the instructions before beginning to install the product.
- Do not leave packing materials (plastic, polystyrene, etc.) within reach of children as such materials are potential sources of danger.
- Store these instructions for future reference.
- This product was designed and built strictly for the use indicated in this documentation. Any other use, not expressly indicated here, could compromise the good condition/operation of the product and/or be a source of danger.
- FAAC declines all liability caused by improper use or use other than that for which the automated system was intended.
- Do not install the equipment in an explosive atmosphere: the presence of inflammable gas or fumes is a serious danger to safety.
- The mechanical parts must conform to the provisions of Standards EN 12604 and EN 12605.
- For non-EU countries, to obtain an adequate level of safety, the Standards mentioned above must be observed, in addition to national legal regulations.
- FAAC is not responsible for failure to observe Good Technique in the construction of the closing elements to be motorised, or for any deformation that may occur during use.
- The installation must conform to Standards EN 12453 and EN 12445. The safety level of the automated system must be C+D.
- Before attempting any job on the system, cut out electrical power and disconnect the batteries.
- The mains power supply of the automated system must be fitted with an all-pole switch with contact opening distance of 3mm or greater. Use of a 6A thermal breaker with all-pole circuit break is recommended.
- Make sure that a differential switch with threshold of 0.03 A is fitted upstream of the system.
- Make sure that the earthing system is perfectly constructed, and connect metal parts of the means of the closure to it.
- The automated system is supplied with an intrinsic anti-crushing safety device consisting

of a torque control. Nevertheless, its tripping threshold must be checked as specified in the Standards indicated at point 10.

- The safety devices (EN 12978 standard) protect any danger areas against mechanical movement Risks, such as crushing, dragging, and shearing.
- Use of at least one indicator-light is recommended for every system, as well as a warning sign adequately secured to the frame structure, in addition to the devices mentioned at point "16".
- FAAC declines all liability as concerns safety and efficient operation of the automated system, if system components not produced by FAAC are used.
- For maintenance, strictly use original parts by FAAC.
- Do not in any way modify the components of the automated system.
- The installer shall supply all information concerning manual operation of the system in case of an emergency, and shall hand over to the user the warnings handbook supplied with the product.
- Do not allow children or adults to stay near the product while it is operating.
- The application cannot be used by children, by people with reduced physical, mental, sensorial capacity, or by people without experience or the necessary training.
- Keep remote controls or other pulse generators away from children, to prevent the automated system from being activated involuntarily.
- Transit through the leaves is allowed only when the gate is fully open.
- The User must not in any way attempt to repair or to take direct action and must solely contact qualified FAAC personnel or FAAC service centres.
- Anything not expressly specified in these instructions is not permitted.

# FRANÇAIS

## CONSIGNES POUR L'INSTALLATEUR

### RÈGLES DE SÉCURITÉ

**ATTENTION!** Il est important, pour la sécurité des personnes, de suivre à la lettre toutes les instructions. Une installation erronée ou un usage erroné du produit peut entraîner de graves conséquences pour les personnes.

- Lire attentivement les instructions avant d'installer le produit.
- Les matériaux d'emballage (matière plastique, polystyrène, etc.) ne doivent pas être laissés à la portée des enfants car ils constituent des sources potentielles de danger.
- Conserver les instructions pour les références futures.
- Ce produit a été conçu et construit exclusivement pour l'usage indiqué dans cette documentation. Toute autre utilisation non expressément indiquée pourrait compromettre l'intégrité du produit et/ou représenter une source de danger.
- FAAC décline toute responsabilité qui dériverait d'un usage improprie ou différent de celui auquel l'automaticisme est destiné.
- Ne pas installer l'appareil dans une atmosphère explosive: la présence de gaz ou de fumées inflammables constitue un grave danger pour la sécurité.
- Les composants mécaniques doivent répondre aux prescriptions des Normes EN 12604 et EN 12605.
- Pour les Pays extra-CEE, l'obtention d'un niveau de sécurité approprié exige non seulement le respect des normes nationales, mais également le respect des Normes susmentionnées.
- FAAC n'est pas responsable du non-respect de la Bonne Technique dans la construction des fermetures à motoriser, ni des déformations qui pourraient intervenir lors de l'utilisation.
- L'installation doit être effectuée conformément aux Normes EN 12453 et EN 12445. Le niveau de sécurité de l'automaticisme doit être C+D.
- Couper l'alimentation électrique et déconnecter la batterie avant toute intervention sur l'installation.
- Prévoir, sur le secteur d'alimentation de l'automaticisme, un interrupteur onnipolaire avec une distance d'ouverture des contacts égale ou supérieure à 3 mm. On recommande d'utiliser un magnétothermique de 6A avec interruption onnipolaire.
- Vérifier qu'il y ait, en amont de l'installation, un interrupteur différentiel avec un seuil de 0,03 A.
- Vérifier que la mise à terre est réalisée selon les règles de l'art et y connecter les pièces métalliques de la fermeture.
- L'automaticisme dispose d'une sécurité intrinsèque anti-écrasement, formée d'un contrôle du couple. Il est toutefois nécessaire d'en vérifier le seuil d'intervention suivant les prescriptions des Normes indiquées au point 10.
- Les dispositifs de sécurité (norme EN 12978) permettent de protéger des zones éventuellement dangereuses contre les Risques mécaniques du mouvement, comme l'écrasement, l'acheminement, le cisaillement.
- On recommande que toute installation soit doté au moins d'une signalisation lumineuse, d'un panneau de signalisation fixé, de manière appropriée, sur la structure de la fermeture, ainsi que des dispositifs cités au point "16".
- FAAC décline toute responsabilité quant à la sécurité et au bon fonctionnement de l'automaticisme si les composants utilisés dans l'installation n'appartiennent pas à la production FAAC.
- Utiliser exclusivement, pour l'entretien, des pièces FAAC originales.
- Ne jamais modifier les composants faisant partie du système d'automaticisme.
- L'installateur doit fournir toutes les informations relatives au fonctionnement manuel du système en cas d'urgence et remettre à l'Usager qui utilise l'installation les "Instructions pour l'Usager" fournies avec le produit.
- Interdire aux enfants ou aux tiers de stationner près du produit durant le fonctionnement.
- Ne pas permettre aux enfants, aux personnes ayant des capacités physiques, mentales et sensorielles limitées ou dépourvues de l'expérience ou de la formation nécessaires d'utiliser l'application en question.
- Eloigner de la portée des enfants les radiocommandes ou tout autre générateur d'impulsions, pour éviter tout actionnement involontaire de l'automaticisme.
- Le transit entre les vantaux ne doit avoir lieu que lorsque le portail est complètement ouvert.
- L'utilisateur doit s'abstenir de toute tentative de réparation ou d'intervention et doit s'adresser uniquement et exclusivement au personnel qualifié FAAC ou aux centres d'assistance FAAC.
- Tout ce qui n'est pas prévu expressément dans ces instructions est interdit.

# ESPAÑOL

## ADVERTENCIAS PARA EL INSTALADOR

### REGLAS GENERALES PARA LA SEGURIDAD

**ATENCION!** Es sumamente importante para la seguridad de las personas seguir atentamente las presentes instrucciones. Una instalación incorrecta o un uso impropio del producto puede causar graves daños a las personas.

- Lean detenidamente las instrucciones antes de instalar el producto.
- Los materiales del embalaje (plástico, poliestireno, etc.) no deben dejarse al alcance de los niños, ya que constituyen fuentes potenciales de peligro.
- Guarden las instrucciones para futuras consultas.

4. Este producto ha sido proyectado y fabricado exclusivamente para la utilización indicada en el presente manual. Cualquier uso diverso del previsto podría perjudicar el funcionamiento del producto y/o representar fuente de peligro.
5. FAAC declina cualquier responsabilidad derivada de un uso impropio o diverso del previsto.
6. No instalen el aparato en atmósfera explosiva: la presencia de gas o humos inflamables constituye un grave peligro para la seguridad.
7. Los elementos constructivos mecánicos deben estar de acuerdo con lo establecido en las Normas EN 12604 y EN 12605.
8. Para los países no pertenecientes a la CEE, además de las referencias normativas nacionales, para obtener un nivel de seguridad adecuado, deben seguirse las Normas arriba indicadas.
9. FAAC no es responsable del incumplimiento de las buenas técnicas de fabricación de los clavos que se han de motorizar, así como de las deformaciones que pudieran intervenir en la utilización.
10. La instalación debe ser realizada de conformidad con las Normas EN 12453 y EN 12445. El nivel de seguridad de la automoción debe ser C+D.
11. Quite la alimentación eléctrica y desconecte las baterías antes de efectuar cualquier intervención en la instalación.
12. Colóquen en la red de alimentación de la automoción un interruptor omnípolo con distancia de apertura de los contactos igual o superior a 3 mm. Se aconseja usar un magnetotérmico de 6A con interrupción omnípolo.
13. Comprueben que la instalación disponga linea arriba de un interruptor diferencial con umbral de 0,03 A.
14. Verifiquen que la instalación de tierra esté correctamente realizada y conecten las partes metálicas del cierre.
15. La automoción dispone de un dispositivo de seguridad antiaplastamiento constituido por un control de par. No obstante, es necesario comprobar el umbral de intervención según lo previsto en las Normas indicadas en el punto 10.
16. Los dispositivos de seguridad (norma EN 12978) permiten proteger posibles áreas de peligro de Riesgos mecánicos de movimiento, como por ej. aplastamiento, arrastre, corte.
17. Para cada equipo se aconseja usar por lo menos una señalización luminosa así como un cartel de señalización adecuadamente fijado a la estructura del bastidor, además de los dispositivos indicados en el "16".
18. FAAC declina toda responsabilidad relativa a la seguridad y al buen funcionamiento de la automoción si se utilizan componentes de la instalación que no sean de producción FAAC.
19. Para el mantenimiento utilicen exclusivamente piezas originales FAAC
20. No efectúen ninguna modificación en los componentes que forman parte del sistema de automoción.
21. El instalador debe proporcionar todas las informaciones relativas al funcionamiento del sistema en caso de emergencia y entregar al usuario del equipo el manual de advertencias que se adjunta al producto.
22. No permitan que niños o personas se detengán en proximidad del producto durante su funcionamiento.
23. La aplicación no puede ser utilizada por niños, personas con reducida capacidad física, mental, sensorial o personas sin experiencia o la necesaria formación.
24. Mantengan lejos del alcance los niños los telemóviles o cualquier otro emisor de impulso, para evitar que la automoción pueda ser accionada involuntariamente.
25. Sólo puede transitarse entre las hojas si la cancela está completamente abierta.
26. El usuario debe abstenerse de intentar reparar o de intervenir directamente, y debe dirigirse exclusivamente a personal cualificado FAAC o a centros de asistencia FAAC.
27. Todo lo que no esté previsto expresamente en las presentes instrucciones debe entenderse como no permitido

## DEUTSCH

### HINWEISE FÜR DEN INSTALLATIONSTECHNIKER

#### ALLGEMEINE SICHERHEITSVORSCHRIFTEN

- ACHTUNG!** Um die Sicherheit von Personen zu gewährleisten, sollte die Anleitung aufmerksam befolgt werden. Eine falsche Installation oder ein fehlerhafter Betrieb des Produktes können zu schwerwiegenden Personenschäden führen.
1. Bevor mit der Installation des Produktes begonnen wird, sollten die Anleitungen aufmerksam gelesen werden.
  2. Das Verpackungsmaterial (Kunststoff, Styropor, usw.) sollte nicht in Reichweite von Kindern aufbewahrt werden, da es eine potentielle Gefahrenquelle darstellt.
  3. Die Anleitung sollte aufbewahrt werden, um auch in Zukunft Bezug auf sie nehmen zu können.
  4. Dieses Produkt wurde ausschließlich für den in diesen Unterlagen angegebenen Gebrauch entwickelt und hergestellt. Jeder andere Gebrauch, der nicht ausdrücklich angegeben ist, könnte die Unverehrtheit des Produktes beeinträchtigen und/oder eine Gefahrenquelle darstellen.
  5. FAAC lehnt jede Haftung für Schäden, die durch unsachgemäßen oder nicht bestimmungsgemäßen Gebrauch der Automatik verursacht werden, ab.
  6. Das Gerät sollte nicht in explosionsgefährdeten Umgebungen installiert werden: das Vorhandensein von entflammbaren Gasen oder Rauch stellt ein schwerwiegendes Sicherheitsrisiko dar.
  7. Die mechanischen Bauteile müssen den Anforderungen der Normen EN 12604 und EN 12605 entsprechen.
  8. Für Länder, die nicht der Europäischen Union angehören, sind für die Gewährleistung eines entsprechenden Sicherheitsniveaus neben den nationalen gesetzlichen Bezugsvorschriften die oben aufgeführten Normen zu beachten.
  9. Die Firma FAAC übernimmt keine Haftung im Falle von nicht fachgerechten Ausführungen bei der Herstellung der anzutreibenden Schließvorrichtungen sowie bei Deformationen, die eventuell beim Betrieb entstehen.
  10. Die Installation muß unter Beachtung der Normen EN 12453 und EN 12445 erfolgen. Die Sicherheitsstufe der Automatik sollte C+D sein.
  11. Vor der Ausführung jeglicher Eingriffe auf der Anlage sind die elektrische Versorgung und die Batterie abzunehmen.
  12. Auf dem Versorgungsnetz der Automatik ist ein omnipolarer Schalter mit Öffnungsabstand der Kontakte von über oder gleich 3 mm einzubauen. Darüber hinaus wird der Einsatz eines Magnetschutzschalters mit 6A mit omnipolarer Abschaltung empfohlen.
  13. Es sollte überprüft werden, ob vor der Anlage ein Differentialschalter mit einer Auslösungsschwelle von 0,03 A zwischengeschaltet ist.
  14. Es sollte überprüft werden, ob die Erdungsanlage fachgerecht ausgeführt wurde. Die Metallteile der Schließung sollten an diese Anlage angeschlossen werden.
  15. Die Automatik verfügt über eine eingebaute Sicherheitsvorrichtung für den Quetschschutz, die aus einer Drehmomentkontrolle besteht. Es ist in jedem Falle erforderlich, deren Eingriffsschwelle gemäß der Vorgaben der unter Punkt 10 angegebenen Vorschriften zu überprüfen.
  16. Die Sicherheitsvorrichtungen (Norm EN 12978) ermöglichen den Schutz eventueller Gefahrenbereiche vor mechanischen Bewegungsrisiken, wie zum Beispiel Quetschungen, Mitschleifen oder Schnittverletzungen.

17. Für jede Anlage wird der Einsatz von mindestens einem Leuchtsignal empfohlen sowie eines Hinweisschildes, das über eine entsprechende Befestigung mit dem Aufbau des Tors verbunden wird. Darüber hinaus sind die unter Punkt "16" erwähnten Vorrichtungen einzusetzen.
18. Die Firma FAAC lehnt jede Haftung hinsichtlich der Sicherheit und des störungsfreien Betriebs der Automatik ab, soweit Komponenten auf der Anlage eingesetzt werden, die nicht im Hause FAAC hergestellt werden.
19. Bei der Instandhaltung sollten ausschließlich Originaleile der Firma FAAC verwendet werden.
20. Auf den Komponenten, die Teil des Automationssystems sind, sollten keine Veränderungen vorgenommen werden.
21. Der Installateur sollte alle Informationen hinsichtlich des manuellen Betriebs des Systems in Notfällen liefern und dem Betreiber der Anlage das Anleitungsbuch, das dem Produkt beigelegt ist, übergeben.
22. Weder Kinder noch Erwachsene sollten sich während des Betriebs in der unmittelbaren Nähe der Automatik aufhalten.
23. Die Anwendung darf nicht von Kindern, von Personen mit verminderter körperlicher, geistiger, sensorieller Fähigkeit oder Personen ohne Erfahrungen oder der erforderlichen Ausbildung verwendet werden.
24. Die Funksteuerungen und alle anderen Impulsgeber sollten außerhalb der Reichweite von Kindern aufbewahrt werden, um ein versehentliches Aktivieren der Automatik zu vermeiden.
25. Der Durchgang oder die Durchfahrt zwischen den Flügeln darf lediglich bei vollständig geöffnetem Tor erfolgen.
26. Der Benutzer darf direkt keine Versuche für Reparaturen oder Arbeiten vornehmen und hat sich ausschließlich an qualifiziertes Fachpersonal FAAC oder an Kundendienstzentren FAAC zu wenden.
27. Alle Vorgehensweisen, die nicht ausdrücklich in der vorliegenden Anleitung vorgesehen sind, sind nicht zulässig

## NEDERLANDS

### WAARSCHUWINGEN VOOR DE INSTALLATEUR

#### ALGEMENE VEILIGHEIDSVOORSCHRIFTEN

**LET OP!** Het is belangrijk voor de veiligheid dat deze hele instructie zorgvuldig wordt opgevolgd. Een onjuiste installatie of foutief gebruik van het product kunnen ernstig persoonlijk letsel veroorzaken.

1. Lees de instructies aandachtig door alvorens te beginnen met de installatie van het product.
2. De verpakkingsmaterialen (plastic, polystyreen, enz.) mogen niet binnen het bereik van kinderen worden gelaten, want zij vormen een mogelijke bron van gevaar.
3. Bewaar de instructies voor raadpleging in de toekomst.
4. Dit product is uitsluitend ontworpen en gebouwd voor het doel dat in deze documentatie wordt aangegeven. Elk ander gebruik, dat niet uitdrukkelijk wordt vermeld, zou het product kunnen beschadigen en/of een bron van gevaar kunnen vormen.
5. FAAC aanvaardt geen enkele aansprakelijkheid voor schade die ontstaat uit oneigenlijk gebruik of ander gebruik dan waarvoor het automatische systeem is bedoeld.
6. Installeer het apparaat niet in een explosiegevaarlijke omgeving: de aanwezigheid van ontvlambare gassen of dampen vormt een ernstig gevaar voor de veiligheid.
7. De mechanische bouwelementen moeten in overeenstemming zijn met de bepalingen van de normen EN 12604 en EN 12605.
8. Voor niet-EEG landen moeten, om een goed veiligheidsniveau te bereiken, behalve de nationale voorschriften ook de bovenstaande normen in acht worden genomen.
9. FAAC is niet aansprakelijk als de regels der goede techniek niet in acht genomen zijn bij de bouw van het sluitwerk dat gemotoriseerd moet worden, noch voor vervormingen die zouden kunnen ontstaan bij het gebruik.
10. De installatie dient te geschieden in overeenstemming met de normen EN 12453 en EN 12445. Het veiligheidsniveau van het automatische systeem moet C+D zijn.
11. Alvorens ingrepen te gaan verrichten op de installatie moet de elektrische voeding worden weggenomen en moeten de batterijen worden afgekoppeld.
12. Zorg op het voedingsnet van het automatische systeem voor een meerpolige schakelaar met een opening tussen de contacten van 3 mm of meer. Het wordt geadviseerd een magnetothermische schakelaar van 6A te gebruiken met meerpolige onderbreking.
13. Controleer of er bovenstromen van de installatie een differentieelschakelaar is geplaatst met een limiet van 0,03 A.
14. Controleer of de aardingsinstallatie vakkundig is aangelegd en sluit er de metalen delen van het sluitwerk op aan.
15. Het automatische systeem beschikt over een intrinsieke beveiliging tegen inklemming, bestaande uit een controle van het koppel. De inschakellijn hiervan dient echter te worden gecontroleerd volgens de bepalingen van de normen die worden vermeld onder punt 10.
16. De veiligheidsvoorzieningen (norm EN 12978) maken het mogelijk eventuele gevarelijke gebieden te beschermen tegen Mechanische gevaren door beweging, zoals bijvoorbeeld inklemming, meesturen of amputatie.
17. Het wordt voor elke installatie geadviseerd minstens één lichtsignaal te gebruiken alsook een waarschuwingsbord dat goed op de constructie van het hang- en sluitwerk dient te worden bevestigd, afgezien nog van de voorzieningen die genoemd zijn onder punt "16".
18. FAAC aanvaardt geen enkele aansprakelijkheid voor wat betreft de veiligheid en de goede werking van het automatische systeem, als er in de installatie gebruik gemaakt wordt van componenten die niet door FAAC zijn geproduceerd.
19. Gebruik voor het onderhoud uitsluitend originele FAAC-onderdelen.
20. Verricht geen wijzigingen op componenten die deel uitmaken van het automatische systeem.
21. De installateur dient alle informatie te verstrekken over de handbediening van het systeem in nood gevallen, en moet de gebruiker van de installatie het bij het product geleverde boekje met aanwijzingen overhandigen.
22. De toepassing mag niet worden gebruikt door kinderen, personen met lichamelijke, geestelijke en sensoriële beperkingen, of door personen zonder ervaring of de benodigde training.
23. Sta het niet toe dat kinderen of volwassenen zich ophouden in de buurt van het product terwijl dit in werking is.
24. Houd radio-afstandsbedieningen of alle andere impulsgevers buiten het bereik van kinderen, om te voorkomen dat het automatische systeem onopzettelijk kan worden aangedreven.
25. Ga alleen tussen de vleugels door als het hek helemaal geopend is.
26. De gebruiker mag zelf geen pogingen ondernemen tot reparaties of andere directe ingrepen, en dient zich uitsluitend te wenden tot gekwalificeerd en geautoriseerd FAAC-personeel of een erkend FAAC-servicecentrum.
27. Alles wat niet uitdrukkelijk in deze instructies wordt aangegeven, is niet toegestaan

## CE DECLARATION OF CONFORMITY

**Manufacturer:** FAAC S.p.A.

**Address:** Via Calari, 10 - 40069 - Zola Predosa - Bologna - ITALY

**Declares that:** Operator mod. 770

- is built to be integrated into a machine or to be assembled with other machinery to create a machine under the provisions of Directive 2006/42/EEC;
- conforms to the essential safety requirements of the following EEC directives:
  - 2006/95/EC Low Voltage directive.
  - 2004/108/EC Electromagnetic Compatibility directive.
- and also declares that it is prohibited to put into service the machinery until the machine in which it will be integrated or of which it will become a component has been identified and declared as conforming to the conditions of Directive 2006/42/EEC and subsequent modifications.

Bologna, December 30, 2009

Managing Director  
A. Marcellan

### Notes on reading the instruction

Read this installation manual to the full before you begin installing the product.

The symbol indicates notes that are important for the safety of persons and for the good condition of the automated system.

The symbol draws your attention to the notes on the characteristics and operation of the product.

## Guide for the installer

Thank you for choosing our product. FAAC is sure that it will give you all the performances you are looking for. All our products are the result of a long experience in the field of the automated systems.

In the middle of the handbook you will find a detachable brochure with the images for the installation.

The **770** automation system for swing gates is a geared motor. It is designed for underground installation and therefore does not alter the appearance of the leaf.

The foundation box of the automation system comes ready to take an operator.

The **770** electromechanical operator is irreversible, so it ensures a mechanical stop and eliminates the need to install an electric lock.

### IMPORTANT NOTES FOR INSTALLER

- Before starting the installation of the operator read this manual completely.
- Keep this manual for future reference.
- Smooth operation and specifications are obtained only declared following the directions given in this handbook and with accessories and safety devices FAAC.
- The lack of a mechanical clutch device requires to ensure an adequate level of security automation, the use of a central control device with an electronically controlled clutch.
- The automation was designed and built to control vehicular access. Avoid any other use.
- The operator can not be used to handle emergency exit routes or gates installed on emergency (escape routes).
- If there is built-in anti motorize from a door to the walkway is required to add a safety switch on the door, connected on the entry of STOP, to inhibit the operation of automation with door open.
- Everything that is not expressly stated in this manual is not allowed.

## 1. DESCRIPTION AND TECHNICAL CHARACTERISTICS

### 1.1. DESCRIPTION (Fig. 1)

Pos.	Description
①	Foundation box
②	Bores for fastening boxcover
③	operator
④	Support bracket for gate
⑤	Locking bracket
⑥	Release device with key
⑦	Crank and connecting rod assembly
⑧	Pinion
⑨	Bore for power supply cable pipe
⑩	Bore for drain pipe
⑪	Fastening screws for operator
⑫	Lubrication bore
⑬	Boxcover
⑭	Plug of closing

### 1.2. TECHNICAL CHARACTERISTICS

Model	770 Lento	770 230V	770 24V
Power supply (Vac) (Vdc)	230	24	
Power (W)	300	380	70
Current (A)	1.3	1.7	3
Thermal protection (°C)	140	/	
Capacitor (μF)	12.5	/	
Max torque (Nm)	250	330	300
Nominal torque (Nm)	170	220	200
Noisiness (dB(A))	< 70		
Angular velocity (°/sec)	4	6	6
Door opening angle	110° (140° and 180° with kit)		
Max. leaf (m)	3.5 (110°) - 3 (180°) - 2.5 (140°)		
Use type and frequency	S3 - 30% / 100%		
Minimum indicative hourly cycles	20 (110° e 180°)	30 (110° e 180°)	100 (110° e 180°)
	36 (140°)	50 (140°)	170 (140°)

Model	770 Lento	770 230V	770 24V
Operating ambient temperature (°C)		-20 ÷ +55	
Operator weight (Kg)		26.5	
Protection class		IP67	
Operator dimensions (mm)		360 x 150 x 140	
Box dimensions		See figura 2	

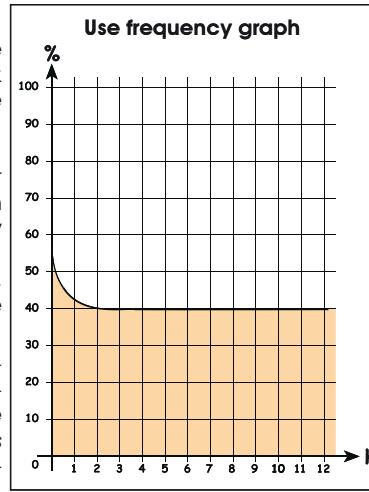

## 2. MAXIMUM USE CURVE

The curve makes it possible to establish maximum work time (T) according to use frequency (F).

With reference to IEC 34-1 standard, the 770 gearmotor operating at S3 service, can function at a use frequency of 30%.

To ensure efficient operation, operate in the work range below the curve.

The curve is obtained at a temperature of 20°C. Exposure to the direct sun rays can reduce use frequency down to 20%.

### CALCULATION OF USE FREQUENCY

The percentage of effective work time (opening + closing) compared to total time of cycle (opening + closing + pause times).

Calculation formula:

$$\% F = \frac{T_a + T_c}{T_a + T_c + T_p + T_i} \times 100$$

where:

T<sub>a</sub> = opening time

T<sub>c</sub> = closing time

T<sub>p</sub> = pause time

T<sub>i</sub> = time of interval between two complete cycles

## 3. ELECTRIC EQUIPMENT (standard system Fig. 3)

Pos.	Description	Cables
①	Operators 770 (require 2 junction boxes)	4x1.5mm <sup>2</sup> (x 24V 2x2.5mm <sup>2</sup> )
②	Photocells TX	2x0.5mm <sup>2</sup>
③	Photocells RX	4x0.5mm <sup>2</sup>
④	Pushbutton	2x0.5mm <sup>2</sup>
⑤	Flashing light	2x1.5mm <sup>2</sup>
⑥	Control unit	3x1.5mm <sup>2</sup> (Supply 230/115V)

To lay electrical cables, use adequate rigid and/or flexible tubes.

Always separate low voltage accessories from those operating at 230 V~. To avoid any interference, always use separate sheaths.

## 4. INSTALLATION OF THE AUTOMATION SYSTEM

### 4.1. PRELIMINARY CHECKS

To ensure trouble-free operation, make sure that the gate (whether existing or yet to be installed) has the following specifications:

- max. weight of single leaf 500 Kg;
- max. length of single gate leaf 3.5 m with levers for 110° opening;
- max. length of single gate leaf 3 m with levers for 180° opening;
- max. length of single gate leaf 2.5 m with levers for 140° opening;
- strong and rigid leaf frame;

- smooth gate movement, with no stiff points;
- min. clearance between bottom edge of gate and ground as in fig. 6a (where 's' = thickness of guide bracket);
- mechanical travel stops.

If any welding or brazing has to be done on the gate, do this before installing the automation system.

**The condition of the gate directly affects the reliability and safety of the automation system.**

#### 4.2. INSTALLATION OF LEAF SUPPORTING FOUNDATION BOX

Proceed as instructed below:

- existing gate with fixed hinges:
  - Remove the gate;
  - Remove the bottom hinge.

**If the gate cannot be removed, place blocks under its bottom edge to support it.**

- existing gate with adjustable hinges:
  - Remove the bottom hinge;
  - Slacken off the top hinge;
  - Swing the leaf around the axis of the top hinge (Fig. 4).

- New gate to be installed:
  - Fit just the top hinge. If possible use an adjustable hinge;

- Dig out a hole for the foundation box as shown in Fig. 5.

**Depending on the nature of the ground, it may be necessary to cast a bed of quick-setting concrete at the bottom of the hole to avoid subsidence in future.**

- Place the foundation box in the hole, respecting the dimensions given in Fig. 6a - 6b - 6c. The center of the pivot on the foundation box must be perfectly aligned with the leaf's axis of swing (Fig. 6a - 6b - 6c).

Use of the gear plate for 180° opening allows the housing case to be embedded in any position. The alignment of the pin present on the case with the leaf's axis of rotation must be respected at all times (Fig. 6c).

- Lay down a PVC tube of diameter 35 mm through which to pass a 4 core electrical cable. The tube must reach from the box to the control unit (Fig. 7 rif. ①). Lay a second tube to drain off rain water, from the box to the nearest drain (Fig. 7 rif. ②).

- Fix the box in place with a casting of concrete.

#### 4.3. SETTING UP THE GATE

**Wait for the cement to set before starting this operation.**

- Assemble the release levers on the support bracket, and fit the latter on the pivot in the foundation box, also inserting the ball supplied (Fig. 8).

**Grease both the pivot and the ball.**

**Do not lubricate the release system for any reason.**

- Prepare the guide bracket, as follows:
  - use a "U" profile with dimensions indicated in Fig. 9;
  - ascertain the correct location of the leaf on the "U" profile with reference to the axis of rotation (Fig. 10a or 10b) ; seal the "U" profile on the post side with a plate, as shown in Fig. 10a or 10b.
- Carefully weld the guide bracket to the support bracket (Fig. 11).
- Fit the gate into the guide bracket and fix the top hinge in place.

**To ensure trouble-free operation, do NOT weld the gate leaf to the guide bracket or to the support bracket.**

- Manually verify whether the gate opens and closes completely and smoothly, stopping at the mechanical travel stops.

#### 5.4. INSTALLING THE OPERATOR

- Open the gate leaf.
- Place the operator on the fastening screws on the foundation box, and fix it by means of the nuts and washers supplied (fig. 13a and 13b).

In order to determine the exact position of the operator with the levers for 110° and 140° opening, please refer to fig. 12. In any case the operator pinion must be on the opposite side of leaves opening direction.

- Manually close the leaf and fit the driving levers supplied, as shown in Fig. 13a.

In order to determine the exact position of the operator, gear plate for 180° opening (Fig. 13b) and the required settings, please refer to the instructions enclosed.

For systems with 110° and 140° opening it is possible to fit the (optional) open (Fig. 14 rif. ①) and close (Fig. 14 rif. ②) mechanical stops inside the housing case. For installation details, please refer to the relative instructions.

**Grease the operator pinion and the fixing pivots of the two levers.**

**Do not oil the gears of the gear plate.**

**Do not lubricate the release system for any reason.**

- Fasten the box cover by means of the screws supplied (Fig. 15).
- Install the second operator, if required, repeating the operations described above.
- Install the electronic control unit, referring to the dimensions indicated in the relevant instructions.

#### 5. START-UP

**Before attempting any work on the system or on the operator, always turn off power.**

Observe points 10, 11, 12, 13, 14 of the GENERAL SAFETY OBLIGATIONS.

Observing the instructions in Fig.3, lay the raceways and make the electric connections of the control board to the selected accessories.

Always separate power cables from control and safety cables (push-button, receiver, photocells, etc...). To prevent any electric noise whatever, use separate sheaths.

- Program the control board according to your needs observing the concerning instructions.
- Switch on power to the system and check the condition of the LEDs according to the table of the control board instructions.

#### 6. TEST OF THE AUTOMATED SYSTEM

Check operating efficiency of the automated system and all accessories connected to it.

Hand the "User's Guide" page to the Client, explain correct operation and use of the operator and indicate the potentially dangerous areas of the automated system.

#### 7. MANUAL OPERATION

Should the need arise to operate the gate manually because of a power failure or malfunction, the release device with key fitted on the support bracket (Fig. 1 rif. ⑥) makes it possible to release the system both from the inside and from the outside.

To operate the leaf manually, proceed as follows:

**Cut power to the system.**

- open the lid of the lock (Fig. 16 rif. ①)
- insert the release key in the lock (Fig. 16 rif. ②)
- turn the key in the direction of the post, as far as it will go (Fig. 16 rif. ③)
- pull the lever out (Fig. 16 rif. ④)
- operate the leaf manually.

#### 8. RETURNING TO NORMAL OPERATION

**To avoid an involuntary pulse from activating the gate during the manoeuvre, before re-locking the operator, switch off power to the system.**

- push the lever back into its home position (Fig. 17 rif. ①)
- insert the release key in the lock and turn it in the direction opposite the post, as far as it will go (Fig. 17 rif. ②)
- operate the leaf manually until the lock is engaged in the locking bracket (Fig. 17 rif. ③)
- close the lid of the lock.
- make sure that the gate cannot be moved manually.
- restore power to the system.

## 9. SPECIAL APPLICATIONS

There are no special applications.

## 10. MAINTENANCE

To ensure correct long-term operation and a constant level of safety, we advise you to generally control the system at least every 6 months. In the "User's Guide" booklet, there is a form for recording jobs.

## 11. REPAIRS

**⚠ The User must not in any way attempt to repair or to take direct action and must solely contact qualified FAAC personnel or FAAC service centres.**

### GENERAL SAFETY REGULATIONS

If used correctly, the automation will ensure a high degree of safety.

Some simple rules regarding behaviour will avoid any accidental trouble:

1. Do not pass through the leaves while they are moving. Before passing through the leaves, wait until they are fully open.
2. Do not, on any account, stand between the leaves.
3. Do not stand near the automation and do not allow children and other people to stand there, especially while it is operating.
4. Keep remote controls or any other pulse generator well away from children to prevent the automation from being activated involuntarily.
5. Do not allow children to play with the automation.
6. The application cannot be used by children, by people with reduced physical, mental, sensorial capacity, or by people without experience or the necessary training.
7. Do not willingly obstruct movement of the leaves.
8. Do not allow branches or shrubs to interfere with leaf movement.
9. Keep illuminated signalling systems efficient and clearly visible.
10. Do not attempt to activate the leaves manually unless you have released them first of all.
11. In the event of a malfunction, release the leaves to allow access and wait for qualified personnel to take appropriate action.
12. After enabling manual operating mode, switch off the power supply to the system before restoring normal operating mode.
13. Do not make any alterations to the components of the automation.
14. The User must not in any way attempt to repair or to take direct action and must solely contact qualified FAAC personnel or FAAC service centres.
15. Call in qualified personnel at least every 6 months to check the efficiency of the automation, safety devices and earth connection.

### DESCRIPTION

These instructions apply to the following model:

**770**

The **770** automation system for swing gates is a geared motor. It is designed for underground installation and therefore does not alter the appearance of the leaf.

The foundation box of the automation system comes ready to take an operator.

The **770** electromechanical operator is irreversible, so it ensures a mechanical stop and eliminates the need to install an electric lock.

A manual release makes it possible to move the gate in the event of a power-cut or fault.

The operators are supervised by an electronic control unit, housed in a container adequately protected against atmospheric agents. The leaves are normally in closed position.

When the electronic control unit receives an opening command by remote control or by any other pulse generator, it activates the operator to rotate the leaves until they are sufficiently open to provide access.

If automatic operating mode was set, the leaves close on their own after the selected pause time has elapsed.

If semi-automatic operating mode was set, a second pulse must be sent to allow the leaves to close again.

A stop pulse (if supplied) always stops movement.

For detail on operation of the automation under different operational logics, consult the installation technician.

The automations include safety devices (photocells, sensitive edges,...) which prevent the leaves from moving when there is an obstacle in the area they protect.

The light indicates that leaves are moving.

### MANUAL OPERATING MODE

Should the need arise to operate the gate manually because of a power failure or malfunction, the release device with key fitted on the support bracket makes it possible to release the system both from the inside and from the outside.

To operate the leaf manually, proceed as follows:

**⚠ Cut power to the system.**

- open the lid of the lock (Fig. 1 rif. ①)
- insert the release key in the lock (Fig. 1 rif. ②)
- turn the key in the direction of the post, as far as it will go (Fig. 1 rif. ③)
- pull the lever out (Fig. 1 rif. ④)
- operate the leaf manually.

### RESTORING NORMAL OPERATING MODE

**⚠ To avoid an involuntary pulse from activating the gate during the manoeuvre, before re-locking the operator, switch off power to the system.**

- push the lever back into its home position (Fig. 2 rif. ①)
- insert the release key in the lock and turn it in the direction opposite the post, as far as it will go (Fig. 2 rif. ②)
- operate the leaf manually until the lock is engaged in the locking bracket (Fig. 2 rif. ③)
- close the lid of the lock.
- make sure that the gate cannot be moved manually.
- restore power to the system.
